# Revolve - Duplicated links on COBOL Detail Page

With the release of the new WebSync (ENT06R62 and REP06R62, 6.2.006 - version 6.2.45), there is a duplication of an entry in the XML/HTML Project Reports COBOL detail pages:

> XML/HTML Project Reports – View Reports
> Click on TYPE
> Go to COBOL
> Click on Called Programs

To fix this issue:
1. Put the attached script, projxmlcoboldetail.RQC, at c:\tps\config\revolve\reql (or where ever you installed Revolve).
2. To ensure the population of the detail pages, delete the XML and HTML folders (these can be found in the project folder…HTML_projectname.prj and XML_projectname.prj).
3. Close Revolve.
4. Start Revolve.
5. Open project
6. Go to Enterprise/Analysis Tools/XML/HTML Project Reports – Generate All
7. Go to XML/HTML Project reports – View Reports
8. Go to Type – COBOL – Called Programs – the link for the single entry will work.
